

# Computer Vision

(VO, 911.908, Winter term 23/24)

**Roland Kwitt**

Department of Artificial Intelligence and Human Interfaces (AIHI)

University of Salzburg, Austria

# Schedule for today

- Logistics
- Resources
- What is computer vision?
- Some typical computer vision problems

# Logistics

- **E-Mail:** Roland [dot] Kwitt [at] plus [dot] ac [dot] at
- **Course material:** available online at <http://rkwitt.org> (→ Teaching)

# Logistics

## Grading

**1 final exam** at the end of the course (see course website for details)

# Resources

**PyTorch** (most recent version v1.12.1)

<https://pytorch.org/>

**scikit-learn** (Python)

<http://scikit-learn.org/stable/>

**scikit-image** (Python)

<http://scikit-image.org>

# Resources

## **“Deep Learning”**

Goodfellow, Bengio, Courville

<http://www.deeplearningbook.org/>

Please check the course website for updates on relevant research papers.

# Resources

Throughout the lecture, we will primarily cover “**modern**” approaches to computer vision, using (deep) neural networks.

However, I still do want to mention a “classic” vision book that is definitely worth reading.

**“Computer Vision: Algorithms and Applications”**

R., Szeliski, 2010

<http://szeliski.org/Book/>

# What is computer vision?

Courtesy of Szeliski

(Luiz Gomez Photos)

The **human visual system (HVS)** is remarkably good at so many tasks, e.g.,

- detecting people & object's
- perceiving translucency, shape, color (see figure on the left),
- counting people & vehicles (see middle figure)
- recognizing scenes, etc.

# What is computer vision?

## Remarkable fact:

A substantial fraction of the macaque's total cortical area is devoted to vision (approx. 15% according to [\[Hubel, "Eye, Brain and Vision"\]](#) )

# What is computer vision?

We want to build systems for **automatic understanding of images/videos**.

This includes, but is not limited to,

- 1) inferring properties of the 3D world (**measurement**)
- 2) enabling recognition of objects, people, scenes, etc. (**perception**)
- 3) mining, searching and interacting with visual data (**search / organization**)

# What is computer vision?

## Bio-Imaging

## Surveillance

## Medical Imaging

## Autonomous Cars

## Mapping

## Robotics

# Overview of the field

## Conferences

### Computer Vision

- Computer Vision and Pattern Recognition (CVPR)
- International Conference on Computer Vision (ICCV)
- European Conference on Computer Vision (ECCV)
- British Machine Vision Conference (BMVC)

### Machine learning

- Neural Information Processing Systems (NIPS)
- International Conference on Machine Learning (ICML)
- International Conference on Learning Representations (ICLR)

# Overview of the field

**Some metrics:** checkout Google scholar on that, [here](#)!

# Typical vision problems

## Recognition

→ “Saiga antelope”

**Task:** Label an image by its class membership

# Typical vision problems

## Segmentation

**Task:** Label each pixel of an image by its class membership.

# Typical vision problems

## Detection

**Task:** Locate and label objects via, e.g., bounding boxes (i.e., coordinates)

# Typical vision problems

## Panoptic Segmentation

**Semantic**  
segmentation

**Instance**  
segmentation

**Panoptic**  
segmentation

Image source: Kirillov et al., "Panoptic Segmentation", In: CVPR '19

**Goal:** Unify semantic segmentation and instance segmentation.

# Typical vision problems

## Image-to-Image translation

Aerial  $\rightarrow$  Map

BW  $\rightarrow$  Color

Label map  $\rightarrow$  Image

# Typical vision problems

## Text-to-Image Generation

Prompt: *An extremely angry bird.*

Prompt: *A photo of a Persian cat wearing sunglasses and a red shirt skateboarding on a beach.*

# Typical vision problems

Synthesizing novel views

# Typical vision problems

[Dalle-2 Demo](#) (not publicly available, you need to sign up and get approved).

# Some interesting resources

Browse D. H. Hubel's online book (Nobel prize winner, 1981)

<http://hubel.med.harvard.edu/book/bcontext.htm>

Read one of his and Torsten Wiesel's seminal papers, e.g.,

**Receptive Fields and Functional Architecture of Monkey Striate Cortex,**

D. H. Hubel and T. N. Wiesel

J. Physiol., 1968

<http://www.ncbi.nlm.nih.gov/pubmed/4966457>)
